Five Things Physicians and Patients Should Question

1. **Don’t perform surgery for a bunion or hammertoes without symptoms.**
   Foot surgery for cosmetic reasons is not supported by medical research. Symptoms such as pain and limitations of activity are the most common reasons to pursue bunion or hammertoe surgery. Patients having surgery for bunions and hammertoes are at risk for a wide range of complications such as nerve damage, infection, bone healing problems and toe stiffness.

2. **Don’t use shoe inserts for symmetric flat feet or high arches in patients without symptoms.**
   Symmetric flat feet or high arches are common conditions, and generally they are asymptomatic. The development of the arch is not related to external supports, and no evidence exists that any support is needed in asymptomatic patients.

3. **Don’t perform surgery for plantar fasciitis before trying six months of non-operative care.**
   With six months of consistent, non-operative treatment, plantar fasciitis will resolve up to 97% of the time. Surgery has a much lower rate of success and has the added possibility of post-operative complications.

4. **Avoid X-ray evaluation of the foot and ankle without standing (weightbearing) in the absence of injury.**
   The functional position of the foot and ankle is one of weightbearing. When compared to non-weightbearing X-rays, deformities of the forefoot, midfoot and hindfoot have been shown to increase on weightbearing X-rays. In addition, narrowing of the ankle joint space on standing X-rays is associated with symptoms of arthritis. Therefore, weightbearing X-rays, when possible, give the most accurate assessment of the functional bony anatomy of the foot and ankle.

5. **Don’t use alcohol injections for Morton’s neuromas.**
   Alcohol can permanently damage the nerve, but without effective pain relief. At five year follow-up, alcohol injection for Morton’s neuroma has both a high recurrence rate and a high rate of complications, including bruising, scar formation, dysesthesia, severe pain and infection.

These items are provided solely for informational purposes and are not intended as a substitute for consultation with a medical professional. Patients with any specific questions about the items on this list or their individual situation should consult their health care provider.
How This List Was Created

In order to formulate this list, the American Orthopaedic Foot & Ankle Society Evidence-Based Medicine Committee reviewed the society position statements on foot and ankle care and solicited expert opinion from specialty leaders including the AOFAS Board of Directors to prepare an initial list of topics for the Choosing Wisely® campaign. The Board of Directors of the AOFAS reviewed the initial list and approved five statements for further development. The Evidence-Based Medicine Committee members reviewed the scientific literature on each statement and presented draft statements with supporting evidence to the committee for formatting. Discussion committee members also reviewed the Choosing Wisely® campaign website to ensure that there was no duplication in proposed content and for proper formatting. The committee evaluated each statement and edited the statement wording and supporting references. Once consensus was reached, the 2014 list was finalized by committee members. The finalized list was then reviewed and approved by the AOFAS Board of Directors. The AOFAS disclosure and conflict of interest policies may be found at www.aofas.org/education/Pages/Education.aspx.

About the ABIM Foundation

The mission of the ABIM Foundation is to advance medical professionalism to improve the health care system. We achieve this by collaborating with physicians and physician leaders, medical trainees, health care delivery systems, payers, policymakers, consumer organizations and patients to foster a shared understanding of professionalism and how they can adopt the tenets of professionalism in practice. To learn more about the ABIM Foundation, visit www.abimfoundation.org.

About the American Orthopaedic Foot & Ankle Society

The American Orthopaedic Foot & Ankle Society (AOFAS) promotes quality, ethical and cost-effective patient care through education, research and training of orthopaedic surgeons and other health care providers. It creates public awareness for the prevention and treatment of foot and ankle disorders, provides leadership in the treatment and understanding of these conditions. The AOFAS serves as a resource for government, industry and the national and international health care community. The 2.000+ AOFAS members are orthopaedic foot and ankle surgeons (MD and DO) who specialize in the diagnosis, care and treatment of patients with disorders of the musculoskeletal system of the foot and ankle. AOFAS is proud to partner with the Choosing Wisely® campaign, as it complements the AOFAS public education, evidence-based medicine and patient outcomes initiatives to improve the quality of patient care. To learn more about AOFAS, visit www.aofas.org.
