3:30 – 3:25 pm
Midfoot Deformity Correction and the Medial Column
Mark S. Myerson, MD
Baltimore, Maryland

1. Where is the apex of the deformity?
2. What comes first? the midfoot arthritis or the flatfoot?
3. When you have an adult acquired flatfoot, deformity, with midfoot arthritis and collapse, how do you know what came first?
4. If the midfoot collapse is the primary problem what are the secondary effects on the hindfoot?
5. Is this part of a global flatfoot deformity?

PRINCIPLES OF CORRECTION
1. Correct all deformity, stabilize the medial column
2. Arthrodesis with re-alignment is important
3. Maintain the anatomy of the midfoot, preserve the length of the medial column
4. Wedge resection of TMT joint is not ideal
5. Maintain or restore the length of the medial column
